# General Suggestions for using McNEILL'S CODE, 1908 EDITION, and TABLES, for the Prevention and Correction of Errors in Cable Messages, including the use of the TERMINAL INDEX, and for securing ECONOMY and SECRECY in Cabling.

## I.—General Suggestions for Use of Code.

In numerous instances one or more alternative readings, separated by brackets are given; as for instance:—

On Page 1: *Aalkasten*, meaning—"Why did you (they) (——) abandon."

These "Blanks" afford the opportunity of applying the word as may be required, thus:—

*Aalkasten Robinson* would be translated—"Why did Robinson abandon?"

Alternatives can also be used, thus:—

The word *Tracapite* means—"Arriving home, 26th April."

but the words *Tracapite Denver* would be translated—"Arriving Denver, 26th April."

It is recommended, whenever it is not within the knowledge of the Sender that the Receiver of the message will be able from the context to discriminate as to which alternative is intended, that one of the cipher words given under the head of **Alternative** (page 57) should be employed, to render misconception impossible.

The cipher word *Appodiasse* (page 134), meaning "Blank," should invariably be employed whenever its use would be likely to obviate error, that is to say, when the sender of a message wishes any "Blank" to be translated "Blank," and is not sure that the receiver will do so. It is found most convenient to fill in the "Blanks" in a message consecutively, and immediately after the cipher word in which they are required.

When there is any chance of doubt arising as to whether the "singular" or the "plural" number is intended to be conveyed, one of the cipher words under the heading **Number** (page 606), or **Word** (page 1,367), should be used. On page 1,367 will also be found cipher words for indicating that the word is employed in its ordinary sense, and is not to be translated as conveying the meaning that may be attached to it in the Code.

**Useful Key Words.**—Throughout the Code are examples of what may be called KEY WORDS which are available when the actual sentences have to be modified, as for instance, on page 521: *Felpendule*, meaning—"Not to be (taken) read literally."

On page 930: *Navigiola*, meaning—"Read the translation of the following cipher word as a question, not as an answer."

So that the word *Navigiola* turns an Answer into a Question, thus:—

Example 1.—*Olivabunt*, meaning—"There is no significance in"
*Navigiola Olivabunt*, meaning—"Is there any significance in"

On page 930: *Naviguerai*, meaning—"Read the translation of the following cipher word as an answer, not as a question."

So that the word *Naviguerai* turns a Question into an Answer, thus:—

Example 1. *Licoperdo*, meaning—"Have you (has ——) reckoned."
*Naviguerai Licoperdo*, meaning—"I (we) have reckoned."

Example 2. *Negotiemus*, meaning—"Shall I (we) set aside."
*Naviguerai Negotiemus*, meaning—"I (we) shall set aside."

On page 1,289 the word *Scoccolai*, meaning—"What view do you take with respect to."

This word *Scoccolai* asks for an expression of the views of the receiver of the message with regard to the preceding matter, subject or action where the exact or complete form of enquiry is not to be found in the Code.

On page 1,367 under the heading **Word**, are sentences enabling the sender of a message to ensure that his precise meaning will be correctly deciphered.

**Overlaps.**—On page 252 will be found instances of what are called "Overlaps," thus:—

The meaning of the word:—

*Bussata* is: "—— per cent. of Gold and Silver contents, less —— per ton treatment charges, also less —— per unit for Copper contents."

That is to say, the complete meaning of the word *Busquons* is included in the word *Bussata*.

On page 308 the word :—

*Coehorn* means—" I consider —— ought to be provided for developments, it will be required within —— months."

That is to say, the complete meaning of the word *Codropolis* is included in the word *Coehorn*. Other similar instances will be found on pages 309 and 314, etc.

Numerous cross references are given in the hope that if the desired sentence is not under the word where it is first looked for, that it will quickly be found by means of the suggested cross references.

**Numbers.**—In addition to the numbers given on pages 94 to 125 in the Tables, a cipher word for each consecutive number from 1 to 105,192 will be found in Part I. of the Code, pages 1 to 1,399.

It therefore follows that any individual number from 1 to 105,192 is available—when so used any initial "ciphers" on the left hand of the groups of figures are omitted, as is also the extended meaning or translation. Generally, the context makes it clear if the cipher word is to be translated as a "Number" or a "Sentence," but in any possible difficulty one of the cipher words under the heading **Numerals**, page 606, can be interpolated.

By thus using the cipher word to mean a number, great detail and economy are possible in cabling.

Thus if it is wished to cable :—

"I estimate the Ore in sight to amount to 36,450 tons, and to have an approximate value of $400,000."

**This can be transmitted by Three cipher words :—**

"*Imminebant, Esfumacao, Zeitparole.*"

| Cable. | | Translation of Message. |
|---|---|---|
| *Imminebant* | = | I (we) estimate the ore in sight to amount to —— tons, and to have an approximate value of —— |
| *Esfumacao* | = | 36,450 |
| *Zeitparole* | = | $400,000 |

Also, when reporting monthly returns and costs, if it be understood between any two correspondents that the cipher words are to be translated as numbers or local currency, the greatest detail can be given with the minimum of expense.

*Example*: Suppose the local currency to be American, and the cable message to be—

"*Stangaron, Essorasse, Viduamini, Xyladenie, Hinwandle, Adnutriens,*
"*Alberaccio, Eupodotis, Arsmetrike, Aciberare.*"

| Cable. | Translation of Message. |
|---|---|
| *Stangaron* | = During —— the mill worked —— days, yield being as follows :— Bullion ——, Concentrates realized ——, Concentrates in process of realization ——, Total ——. The working expenses for the month were ——. We have also spent on development work during the month ——. |
| *Essorasse* | = June |
| *Viduamini* | = 26 |
| *Xyladenie* | = $27,500 |
| *Hinwandle* | = The five following words are used as numerals |
| *Adnutriens* | = 03625 = $3,625 |
| *Alberaccio* | = 06103 = $6,103 |
| *Eupodotis* | = 37228 = $37,228 |
| *Arsmetrike* | = 11256 = $11,256 |
| *Aciberare* | = 01769 = $1,769 |

The complete translation of the above message then reads as follows:—

"During June the mill worked 26 days, yield being as follows:—

| | |
|---|---|
| "Bullion ... ... ... ... ... | $27,500 |
| "Concentrates realized ... ... ... | 3,625 |
| Concentrates in process of realization... | 6,103 |
| "Total ... ... | $37,228 |
| "The working expenses for the month were | $11,256 |
| "We have also spent on development work "during the month ... ... ... | $1,769 |

The use of the cipher word *Hinwandle* is of the nature of an extra precaution, and could generally be quite safely dispensed with.

## II.—General Suggestions for use of the Tables.

In the Tables—Part II.—**one cipher word** is employed which is to be translated by **the combined meanings both of the horizontal and vertical columns**, thus on page 7 of the Tables :—

The word *Starkwurz* means "Next Sunday."
„ *Statischer* „ "Delay until Monday."
„ *Statucolo* „ "Cannot agree to your cable of Monday."
„ *Steenbeen* „ "Cannot agree to your cable of Friday."

On pages 8 to 11 is a Table for "**Survey of Mineral Properties**"—the items are numbered consecutively from 1 to 142 on pages 8 to 11, on pages 8 and 10 the sentences are given in full, but on pages 9 and 11 numbers only are employed to save space, so that :—

The word *Steinkatze* means "Accessibility."
The „ *Stellerus* „ "Report is misleading as to accessibility."
On page 9 „ *Steunpaal* „ "Report by cable as to accessibility."

The word "Accessibility" is to be found by referring to line 21 on page 8.

On page 12.—In the column headed "**Calendar**" the Cipher word indicates the date only, thus :—

The word *Stravizza* means "January 1st,"

while in the subsequent columns the meaning in the top of the vertical column is conjoined to the date, thus :—

The word *Streepzaad* means "Refer to my cable dated January 1st."
„ *Striculum* „ "Have not received cable dated January 7th."

The first columns on pages 12 to 31 thus constitute **a complete Calendar for every day of the year**, and the other columns render it possible to refer to each day individually **as regards Cables.**

Similarly, on pages 32 to 51 are given references for **each day throughout the year for Letters**, thus on page 32 :—

The word *Tabulemur* means "Send duplicate of letter dated January 1st."
„ *Tachetons* „ "Refer to your letter dated January 11th."

Pages 52 to 71 afford **miscellaneous references for each and every day of the year**, thus :—

On page 52 the word *Tischzeug* means "To date from January 1st."
„ *Titulizaba* „ "Arriving home on January 16th."

On page 53 the word *Todesbeet* means "Shareholders meet on January 1st."

On most of the remaining Tables examples are given on the respective Tables themselves, thus :—

On page 88 the word *Verbakker* means "$\frac{1}{16}$."
" *Verblumeln* " "$\frac{1}{16}$ of an inch."
" *Verdroogd* " "$\frac{1}{16}$ of £1, *i.e.*, 1s. 3d."

## III.—Suggestions for the Prevention and Correction of Errors in Cable Messages.

Errors in telegraphic messages may be due to one of several causes : such as want of care on the part of the sender when writing his original message, an imperfect "i" may have been read, quite excusably, by the Transmitting Clerk as an "e," or a "t" may have been mistaken for an "l" or a "b," and *vice versâ*, "m" and "n" or "n" and "u" are often transmuted.

Failing the employment of a typewriting machine, **Roman characters** should always be employed for the cipher words.

Another fruitful cause of error is owing to the fact that each individual letter of the Alphabet is telegraphically transmitted by means of a certain number of "dots" or "dashes," such "dots" or "dashes" being separated by suitable "time intervals." Hence it is possible, by a slight variation on the part of either the Transmitting or the Receiving Clerk, to alter considerably the word intended to be conveyed.

For example, the signals for the letter C are — . — .

Whilst those for the letters T E N are respectively { T E N / — . — . }

It follows, therefore, that the words "cable" and "tenable" may be so transmitted as to be not very readily distinguishable.

| C | | A | B | L | E |
|---|---|---|---|---|---|
| — . — . | | . — | — . . . | . — . . | . |
| T E N | | | | | |
| — . — . | | . — | — . . . | . — . . | . |

The omission of a signal, the conversion of a "dot" into a "dash," and the improper lengthening or shortening of the "time interval" are responsible for many of the errors in cipher messages.

The same observations apply also to figures.

Thus the signal for the figure 1 is . — — — — —, which by a variation of the time intervals may become { A . — / O — — — / or W . — — / M — — / or J . — — — / T — }

On receipt of an undecipherable word, a reference to the Morse Signals for letters and figures, with some possible substitutions (*see* page XIII.), and the exercise of a little patience, will often be found sufficient to indicate the word sought after.

Most of the cable companies will courteously repeat undecipherable words "free of cost," or on application will make such suggestions as may lead to the correct interpretation of them.

It is strongly recommended that any one beginning to use this Code should study it whenever occasion may serve, as by such means great facility will be gained in selecting those sentences which most nearly convey the meaning of the sender of the message.

## IV.—Use of the Terminal Index.

The Terminal Index is invaluable for quickly discovering the meaning of a mutilated word. These mutilations as a rule take place either at the Beginning or the End of a Cipher word. If the mutilation takes place at the end, no great difficulty occurs owing to the arrangement of the Cipher words in the Code being alphabetical but if the word is mutilated at the beginning the difficulty of finding it is considerable.

Thus suppose the word *Bitrifia* is received in a cable message. It cannot be found in the Code where it should be if correct, namely, on page 224, and much time is wasted and trouble caused by its repetition and possibly the chances of securing business lost, by the consequent delay. To prevent all these, on receipt of a cipher word that cannot be found in its proper place, refer to the Terminal Index in which every cipher word in the Code is arranged in the alphabetical order *of its termination.* It is found that there is only one word ending in *itrifia*, namely *Vitrifia*, and a rapid reference to the word *Vitrifia* gives the required translation as "£226 sterling." In the above instance the only mutilation had been the substitution of the letter "B" for the letter "V." Where the Terminal Index indicates there are several words all having the same ending, the context of the respective words in the translated message will quickly indicate which is the actual word required to complete the message.

## V.—Secret Cipher Messages.

Increased secrecy when cabling can be secured if it is mutually agreed between any two correspondents to employ the cipher words not in their actual order, but in some other and pre-arranged order. The advantage of changing this order from time to time is obvious.

As a rule a Secret Cipher message is quickly found to be such by the Receiver inasmuch as the words when translated by the Code in the ordinary way or "Straight" convey no intelligible meaning. To save time, however, a word to be arbitrarily selected by any two correspondents, and preferably not in the Code itself, can be used as the first word of a message and as indicating that the words that follow it are by the Secret Cipher. In the Code itself words will be found which can be used for this and similar purposes, thus :—

Under the headings "Cipher," p. 198; "Code," p. 211 "Secret(ly)" p. 912–913 and "Word," p. 1367.

## VI.—Economy and Secrecy in Cabling Monthly Returns.

Great **economy** whilst at the same time **increased secrecy** can be secured when cabling **Monthly Returns** by the adoption of the following method: —

Suppose for example it is desired to cable information monthly such as is covered by the word *Stanchita* (see Tables, page 1) which translates:—

**Results for past month: ——— stamps working ——— days ——— hours crushed ——— tons (2,000 lbs.); yield from mill ——— ounces; from sands and concentrates ——— ounces; fr m slimes (current and accumulated) ——— ounces; total ——— ounces of fine gold; estimated value ———; estimated working profit ———.**

and that the actual figures of the Returns to be coded are as follows:—

Results for the past month—

110 Stamps working 27 days 12 hours crushed 8,430 tons.

| | | |
|---|---|---|
| Yield from Mill ... ... ... ... | 2,710 | ounces. |
| „ Sands and Concentrates ... | 420 | ounces. |
| „ Slimes—Current and Accumulated ... ... ... | 310 | ounces. |
| Total ... | 3,440 | ounces of Fine gold. |
| Estimated value ... ... ... ... | £13,765 | |
| Estimated working profit ... ... ... | £4,562 | |

In the above message there are ten sets of figures. It is clear that the days of the month can never want more than two figures and a Stamp Mill rarely exceeds three figures, we can therefore in the above example always transmit the number of stamps and the days of the month as one word, thus:—

| Cipher Word | | | | | | |
|---|---|---|---|---|---|---|
| *Arregazare*—**add Nothing** | 1 | 1 | 0* | 2 | 7* | **add Nothing** |

It will be noted that the above five spaces are divided in 3 spaces and 2 spaces respectively by the * and to indicate that nothing is to be added to the figures, put the words "**add Nothing**" on each side.

From the foregoing it will be seen that the Principle is :—

(*a*) To employ the **cipher words** on pages 1 to 1,399 as representing **Numbers.**

NOTE.—As Part I. contains every consecutive number from 1 to 105,192, it follows every such number is available, and moreover that the numbers from 1 to 99999 are in groups of 5 figures each.

(*b*) To employ **one** cipher word for **two or more** groups of figures.

Example 1.—It is required to cable: "110 stamps working 27 days." The group of figures is 11027 the cipher word for which is *Arregazare* = 11027, arranging a Skeleton Table and dividing off the groups of figures thus :—

| *Arregazare*—**add Nothing** | 1 | 1 | 0* | 2 | 7* | **add Nothing** |
|---|---|---|---|---|---|---|

When the word *Arregazare* is received it is put against the Skeleton Table and translated as above.

The words "**add Nothing**" are written upon the Table as a reminder that the groups of figures are complete in themselves.

Example 2.—Suppose instead of :—

110 Stamps working 27 days

there had been :—

85 Stamps working 10 days,

the cipher word to be employed would be *Angelized* = 08510.

| *Angelized*—**add Nothing** | 0 | 8 | 5* | 1 | 0* | **add Nothing** |
|---|---|---|---|---|---|---|

and so on for every group of numbers desired to transmit.

Reverting to the original message, the next two groups of figures to be dealt with are—"12 hours and 8,430 tons."

Allowing 2 units for the "hours," it is decided to report the tonnage to within 10 tons, so the final "0" in 8,430 may be omitted from the Cable, but must be replaced in the Translation. As a reminder that this must be done the words "**add one '0'**" are written upon the Skeleton Table, thus :—

| **add Nothing** | | * | | | * | **add one "0"** |
|---|---|---|---|---|---|---|

The group of figures is 12843, the cipher word for which is *Auffangend*, which is put against the Skeleton Table, thus :—

| *Auffangend*—**add Nothing** | 1 | 2* | 8 | 4 | 3* | **add one "0"** |
|---|---|---|---|---|---|---|

Similarly the next two groups to be dealt with are :—

Yield from Mill ... ... ... ... ... 2,710 ounces.
„ Sands and Concentrates ... ... 420 ounces.

Dropping off the final "0" from each, the groups of figures to be dealt with is 27142, the cipher word for which is *Degrillons*, which is put against the Skeleton Table, thus :—

| | | | | | | |
|---|---|---|---|---|---|---|
| *Degrillons*—**add one "0"** | 2 | 7 | 1* | 4 | 2* | **add one "0"** |

Similarly the next two groups to be dealt with are :—.

Slimes (current and accumulated) 310 ounces.
Total, 3,440 ounces of Fine gold.

Dropping off the final "0" the group of figures to be dealt with is 31344, the cipher word for which is *Drehreep*, which is put against the Skeleton Table, thus :—

| | | | | | | |
|---|---|---|---|---|---|---|
| *Drehreep*—**add one "0"** | 3 | 1* | 3 | 4 | 4* | **add one "0"** |

The fifth group of figures is "13765," cipher word *Azotariais*, which it may be advisable to leave as units.

| | | | | | | |
|---|---|---|---|---|---|---|
| *Azotariais*—**add Nothing** | 1 | 3 | 7 | 6 | 5 | **add Nothing** |

and similarly with the final group "04562," cipher word *Affinatore*, thus :—

| | | | | | | |
|---|---|---|---|---|---|---|
| *Affinatore*—**add Nothing** | 0 | 4 | 5 | 6 | 2 | **add Nothing** |

The foregoing indicates the method of constructing the Skeleton Table, and in practice these are prepared and ruled in readiness for receipt of cable, thus :—

| Cipher Word. | | | | | | |
|---|---|---|---|---|---|---|
| ..... | **add Nothing** | ..... | ..... | * | ..... | * | ..... | **add Nothing** |
| ..... | **add Nothing** | ..... | * | ..... | ..... | * | ..... | **add one "0"** |
| ..... | **add one "0"** | ..... | ..... | * | ..... | * | ..... | **add one "0"** |
| ..... | **add one "0"** | ..... | * | ..... | ..... | * | ..... | **add one "0"** |
| ..... | **add Nothing** | ..... | ..... | ..... | ..... | * | ..... | **add Nothing** |
| ..... | **add Nothing** | ..... | ..... | ..... | ..... | * | ..... | **add Nothing** |

On receipt of the cable message:—

*"Stanchita, Arregazare, Auffangend, Degrillons, Drehreep, Azotariais, Affinatore,"* the words are placed in their proper positions, and translated by the groups of figures they represent, thus:—

Key word *Stanchita*—

| Cipher Word. | | | | | | | |
|---|---|---|---|---|---|---|---|
| *Arregazare* | **add Nothing** | 1 | 1 | 0* | 2 | 7* | **add Nothing** |
| *Auffangend* | **add Nothing** | 1 | 2* | 8 | 4 | 3* | **add one "0"** |
| *Degrillons* | **add one "0"** | 2 | 7 | 1* | 4 | 2* | **add one "0"** |
| *Drehreep* | **add one "0"** | 3 | 1* | 3 | 4 | 4* | **add one "0"** |
| *Azotariais* | **add Nothing** | 1 | 3 | 7 | 6 | 5* | **add Nothing** |
| *Affinatore* | **add Nothing** | 0 | 4 | 5 | 6 | 2* | **add Nothing** |

The next step is to amplify the groups of figures according to the instructions given on the right and left of the Skeleton Table, thus:—

| | | | | | |
|---|---|---|---|---|---|
| The Group | 110 | is marked | **"add Nothing"** | and remains | 110 |
| ,, | 27 | ,, | ,, ,, | ,, ,, | 27 |
| ,, | 12 | ,, | ,, ,, | ,, ,, | 12 |
| ,, | 843 | ,, | **"add one '0'"** | and becomes | 8430 |
| ,, | 271 | ,, | ,, ,, | ,, | 2710 |
| ,, | 42 | ,, | ,, ,, | ,, | 420 |
| ,, | 31 | ,, | ,, ,, | ,, | 310 |
| ,, | 344 | ,, | ,, ,, | ,, | 3440 |
| ,, | 13765 | ,, | **"add Nothing"** | and remains | 13765 |
| ,, | 04562 | ,, | ,, ,, | ,, ,, | 4562 |

Now inserting the figures in the translation of the word *Stanchita*, we get:—

Results for the past month—

110 Stamps working 27 days 12 hours crushed 8,430 tons.

| | |
|---|---|
| Yield from Mill ... ... ... ... | 2,710 ounces. |
| ,, Sands and Concentrates ... | 420 ounces. |
| ,, Slimes—Current and Accumulated... ... ... | 310 ounces. |
| Total ... | 3,440 ounces of Fine gold. |
| Estimated value ... ... ... ... | £13,765 |
| Estimated working profit... ... ... | £4,562 |

Once the Key word such as *Stanchita* has been agreed between any two correspondents and a Skeleton Table arranged as above, it is quite unnecessary to cable the Key word, and **a full translation as above is secured in Six cipher words.**

When there is no return from any particular section of the Plant, ciphers are put in thus—say in line 3, the message to be sent is:—

Yield from Mill 2,710 ounces.

Yield from Sands and Concentrates, Nil.

| | | | | | | |
|---|---|---|---|---|---|---|
| *Degluerai*—**add one "0"** | 2 | 7 | 1* | 0 | 0* | **add one "0"** |

which is translated as indicated above:—

Namely—

Yield from Mill ... ... ... ... 2710 ounces.

Yield from Sands and Concentrates... ... Nil.

In the foregoing example, the directions "**add one '0'**" have been employed, but it will be readily understood that "**add two '0's'**" may be similarly indicated. This is particularly the case in dealing with "Dollars," "Francs" or "Marks" in a Return, or dealing with large tonnages of Tailings, etc., etc.

Thus, in the above example, if the figures to be sent had been

Yield from Mill ... ... ... ... 27,100 ounces.

Yield from Sands and Concentrates ... 4,200 ounces.

the Skeleton Table would be arranged

| | | | | | | |
|---|---|---|---|---|---|---|
| **add two "0's"** | | | * | | * | **add two "0's"** |

the word to be transmitted would be

*Degrillons* = 27142.

| | | | | | | |
|---|---|---|---|---|---|---|
| *Degrillons*—**add two "0's"** | 2 | 7 | 1* | 4 | 2* | **add two "0's"** |

and the return would be translated

Yield from Mill ... ... ... ... ... 27,100 ounces.

Yield from Sands and Concentrates ... ... 4,200 ounces.

*Any suggestions will be most cordially received.*

NOTE.—The letters "E" and "T" are sometimes omitted entirely from a cipher word.

The letter "*l*" is transmitted as "*b*" or "*t*" and *vice versâ*, or "*i*" as "*e*" or "*n*" as "*u*," due generally to illegible writing on the part of the sender.
